## **CORRECTION NOTICES**

Vol. 91, Nos. 10-12:

p. 637: The sentences beginning at bottom of column 1 should read: "In all figures the Q curve is a plot of increments of pressure corrected optical depth, in centimeters of precipitable water vapor, between successive pressure intervals. This plotted curve utilizes the numerical values of the radiation scale. It is interesting to see the optical depth increments decrease through the cloud, from 570 through 490 mb. in this example."

pp. 637-639: In captions to figures 2-6 "mixing ratio Q" should be changed to "optical depth Q."

Vol. 92:

No. 3, p. 146: Reference 4 should be J. F. O'Connor "The Weather and Circulation of January 1963—One of the Most Severe Months on Record in the United States and Europe," Monthly Weather Review, vol. 91, No. 4, Apr. 1963, pp. 209-217.

- No. 5, p. 211, col. 1: Last sentence before section 4 should read "Hilo's second highest morning count, 488," etc.
  - p. 212, table 4: Caption should read "Median number of ice crystals and of dust particles" etc. A second row should be added to the table as follows:

a.m. p.m a.m. p.m. Dust particles 400 280 218 238

p. 217, last sentence in last complete paragraph in col. 2 should read: "On both occasions, the possibility that nuclei from higher aloft may have been involved in the increase at MLO, which preceded by a day that at Hilo, is somewhat discounted by the fact that counts at the Observatory were less than a tenth those at Hilo."

No. 5, pp. 251 and 252: In the legends to figures 1 and 2, the date should be September 12, 1961.

No. 8, p. 380: The time of the fall of hailstones in central Montana should be 1900 msr (7 p.m.) not 0700 msr.
